

Linked Cards

Search or browse for something to borrow at your library!

1. Click on the **3 lines** (middle icon at the bottom) to view all your library cards, manage notifications, or access Help & Support (including the **new Settings option**). To go back, click on any icon at the bottom.
2. To view your linked cards, click on the **cards +** option next to "Add Library" (picture example: 2 cards +).

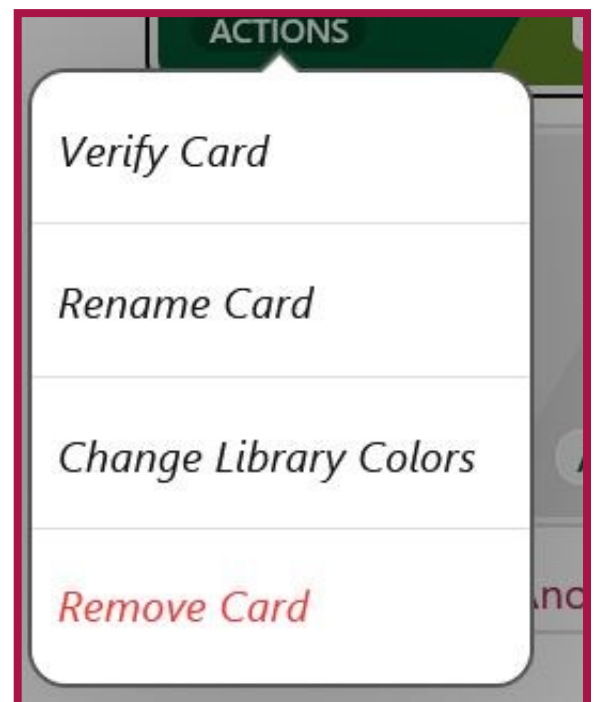

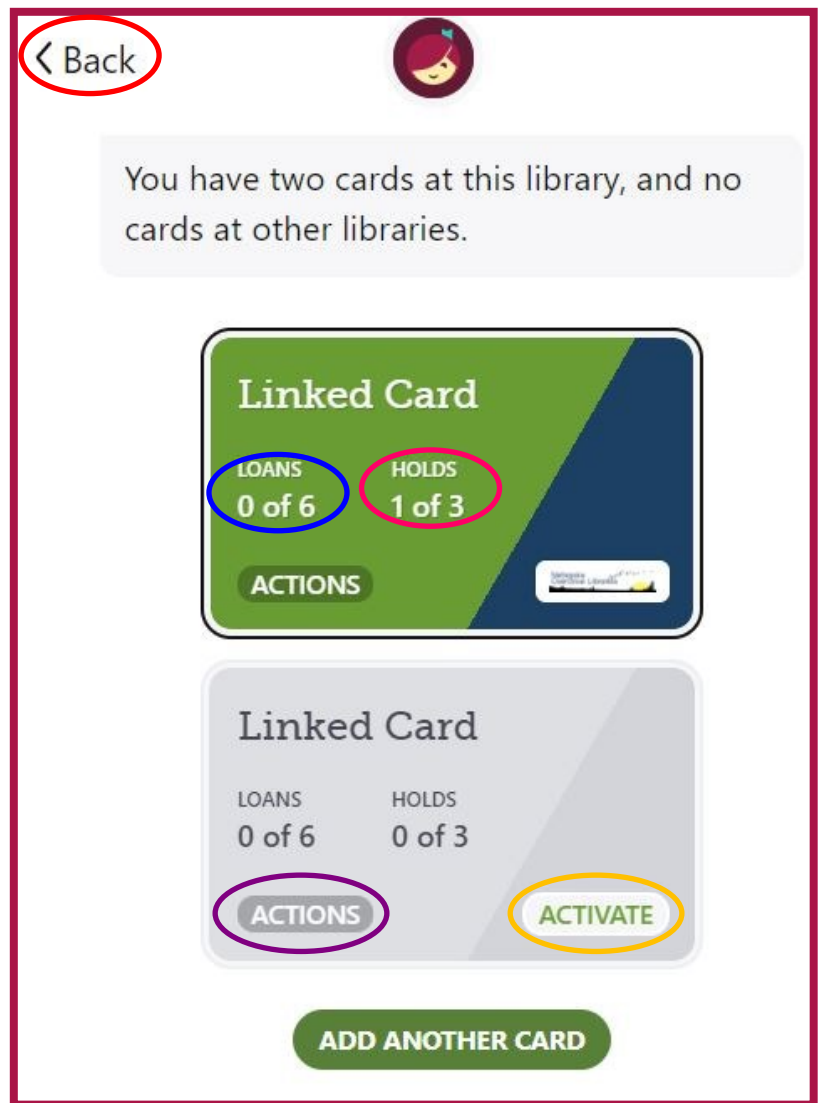

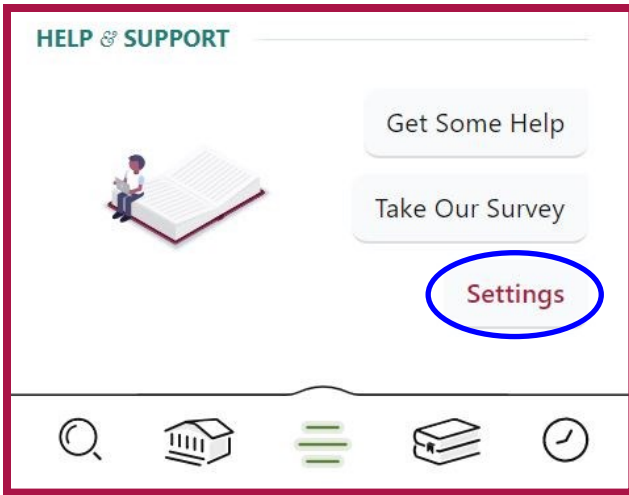

3. A new window will pop up showing all of the library cards you have saved in Libby (the current card you are viewing under will appear green).

4. It will also show the current number of “Loans” and “Holds” for each card. To choose the other card, click “Activate.”

5. If you wish to return to the previous screen, you have the option to go “Back” to return to the Libby Library or Shelf.

6. To change the linked card, click “Actions” and a new window will pop up to “Verify Card,” “Rename Card,” “Change Library Colors,” or “Remove Card.” Removing the card will only remove the card from the current device.

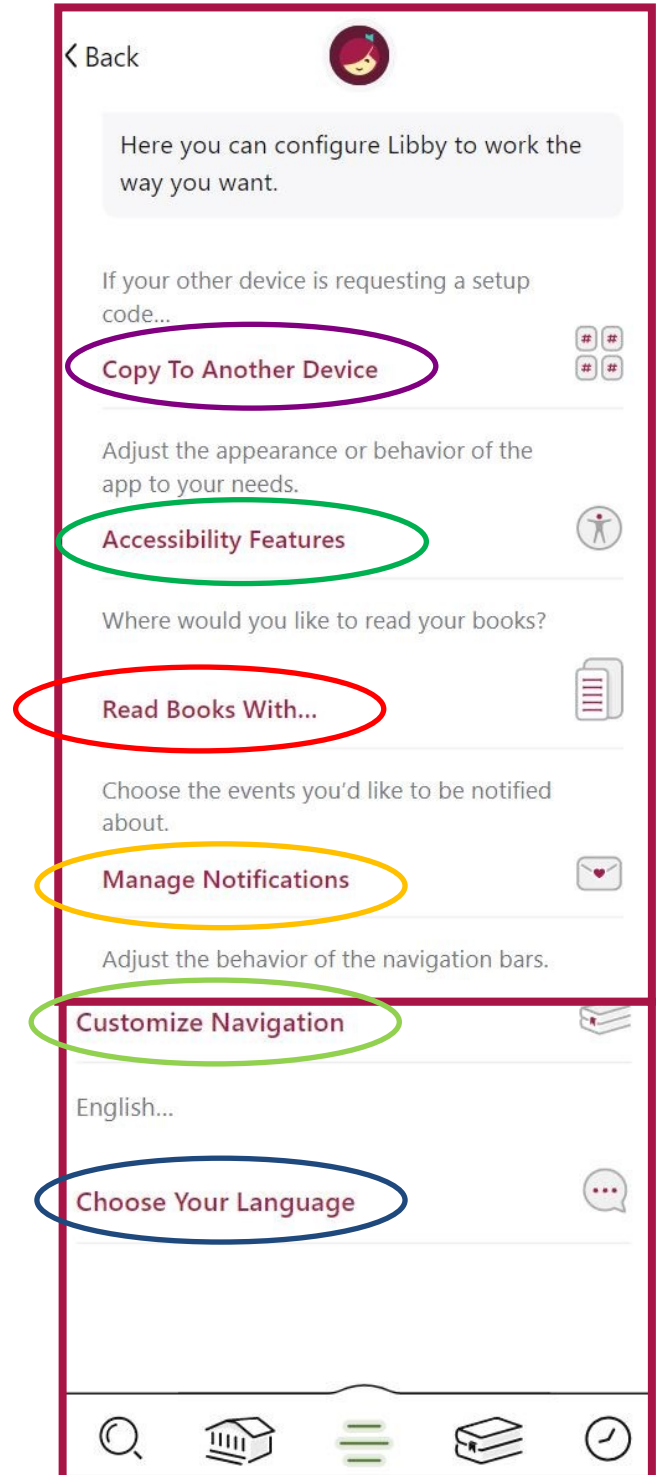

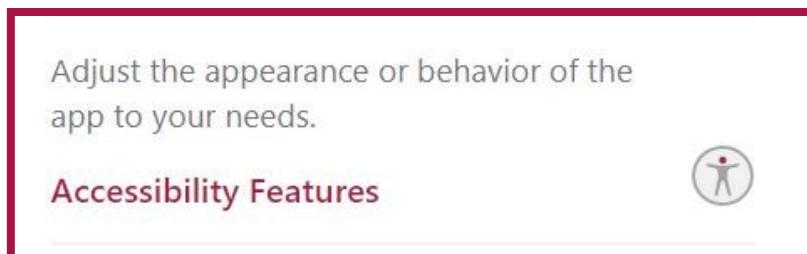

7. To manage your settings click on “Settings” at the bottom of the screen.

8. A new screen will pop up with several options to configure the Libby app to the way you want.

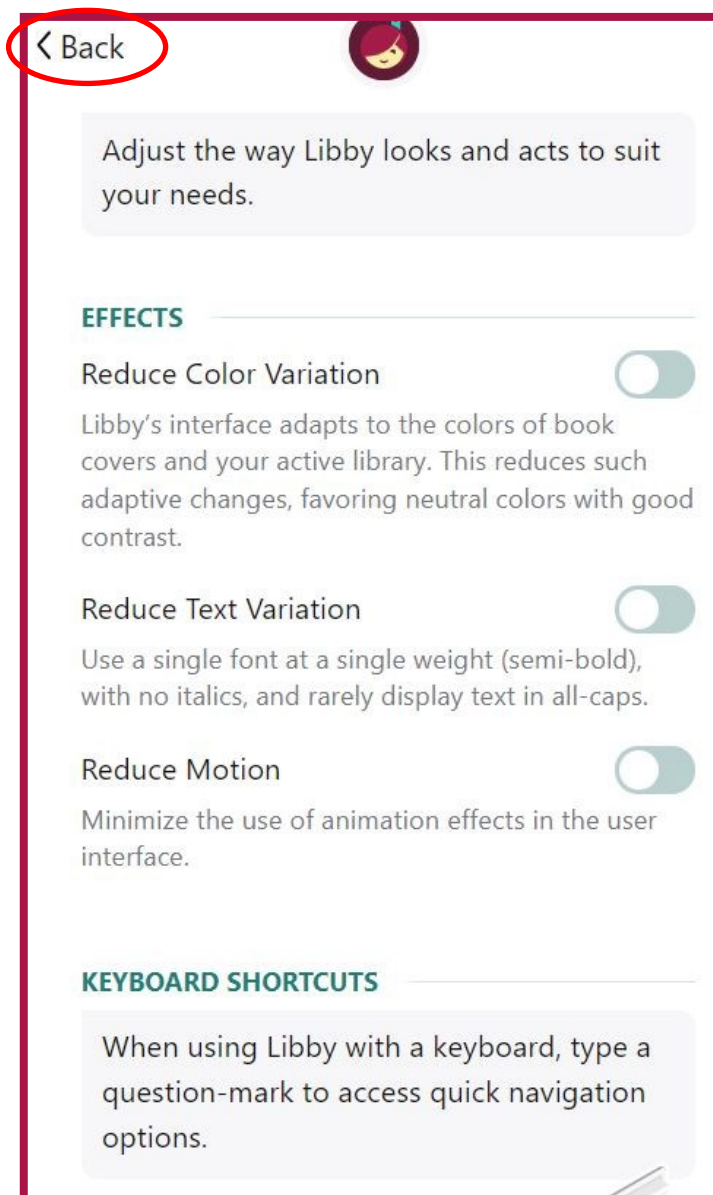

Select “Copy to Another Device” if you are setting up Libby on another device. “Accessibility Features” allows you to adjust the appearance of the app. “Read Books With...” gives you the option to automatically read in the Libby App or with Kindle. “Manage Notifications” lets you choose how to be notified for different events, such as a hold is ready. Adjust the navigation bar through “Custom Navigation” or change the language through “Choose Your Language.”

9. To adjust some of the appearance settings, select “Accessibility Features.” A new screen will pop up to change the effects settings.

10. You have the option to reduce color variation, reduce text variation, or reduce motion. Select the button to the left of the setting to turn it on (if it looks faded, it is off). Select “Back” to go back to the different settings.

11. To change how the navigation bar looks (the bottom of the screen where the icons are), select “Custom Navigation.”

12. A new screen will pop up to choose when the bar shows up or how it looks. A **check mark** will be next to the setting currently used.

13. Select the button next to “Labeled Icons” to show labels for everything on the navigation bar. This is helpful if you forget what each icon is for. A check mark means that this setting is on. Select “Back” to go back to the different settings.
